REMEDIATION

From simple clean-ups to complex projects with multiple contaminants, remediation projects face a variety of water treatment challenges. Permitting is often involved and multiple source inputs must be considered. Whether dealing with an offshore dredge, near shore remediation or contaminated groundwater dewatering, WaterTectonics understands these complexities. By leveraging experience working with state and federal agencies, WaterTectonics gains approval for implementing innovative technologies that meet regulatory standards, improve project performance and reduce overall project operating costs.

TECHNOLOGIES
- Wavelonis Electrocoagulation Systems
- AcistBox Chemical Treatment Systems
- Ultraflo Ultra Filtration Systems
- PhatBox Treatment System

SERVICES
- Project-Specific Treatment Design Plans
- Permitting Assistance with Stormwater Plans, Including Local & State Filings
- Operator Training Courses
- Treatment System Operations Support
- Treatability Testing

APPLICATIONS
- Dredging & Remediation Clean-up
- Construction & Groundwater Treatment
- Near Shore & Upland Work
